

Green Industrial Hydrogen for future green steelmaking

Clean Steel

Simon Kroop, Salzgitter Mannesmann Forschung, 2021-10-18

This project has received funding under grant
agreement No 826350.

The GrInHy2.0 prototype in a Nutshell

- First High Temperature Electrolyser in megawatt scale:
 $720 \text{ kW}_{\text{el,AC}}$ producing $200 \text{ Nm}^3/\text{h}$ (18 kg/h)
- Full integration into the existing infrastructure and management energy control system:
 $>13,000$ operating hours while producing at least 100 t hydrogen
- Hydrogen based on green electricity and industrial steam from waste heat of steel production:
Electrical electrolyser efficiency up to $84 \%_{\text{el,LHV}}$ ($< 40 \text{ kWh}_{\text{el,AC}}/\text{kg}$)

GrInHy2.0 Design

GrInHy2.0 – Status

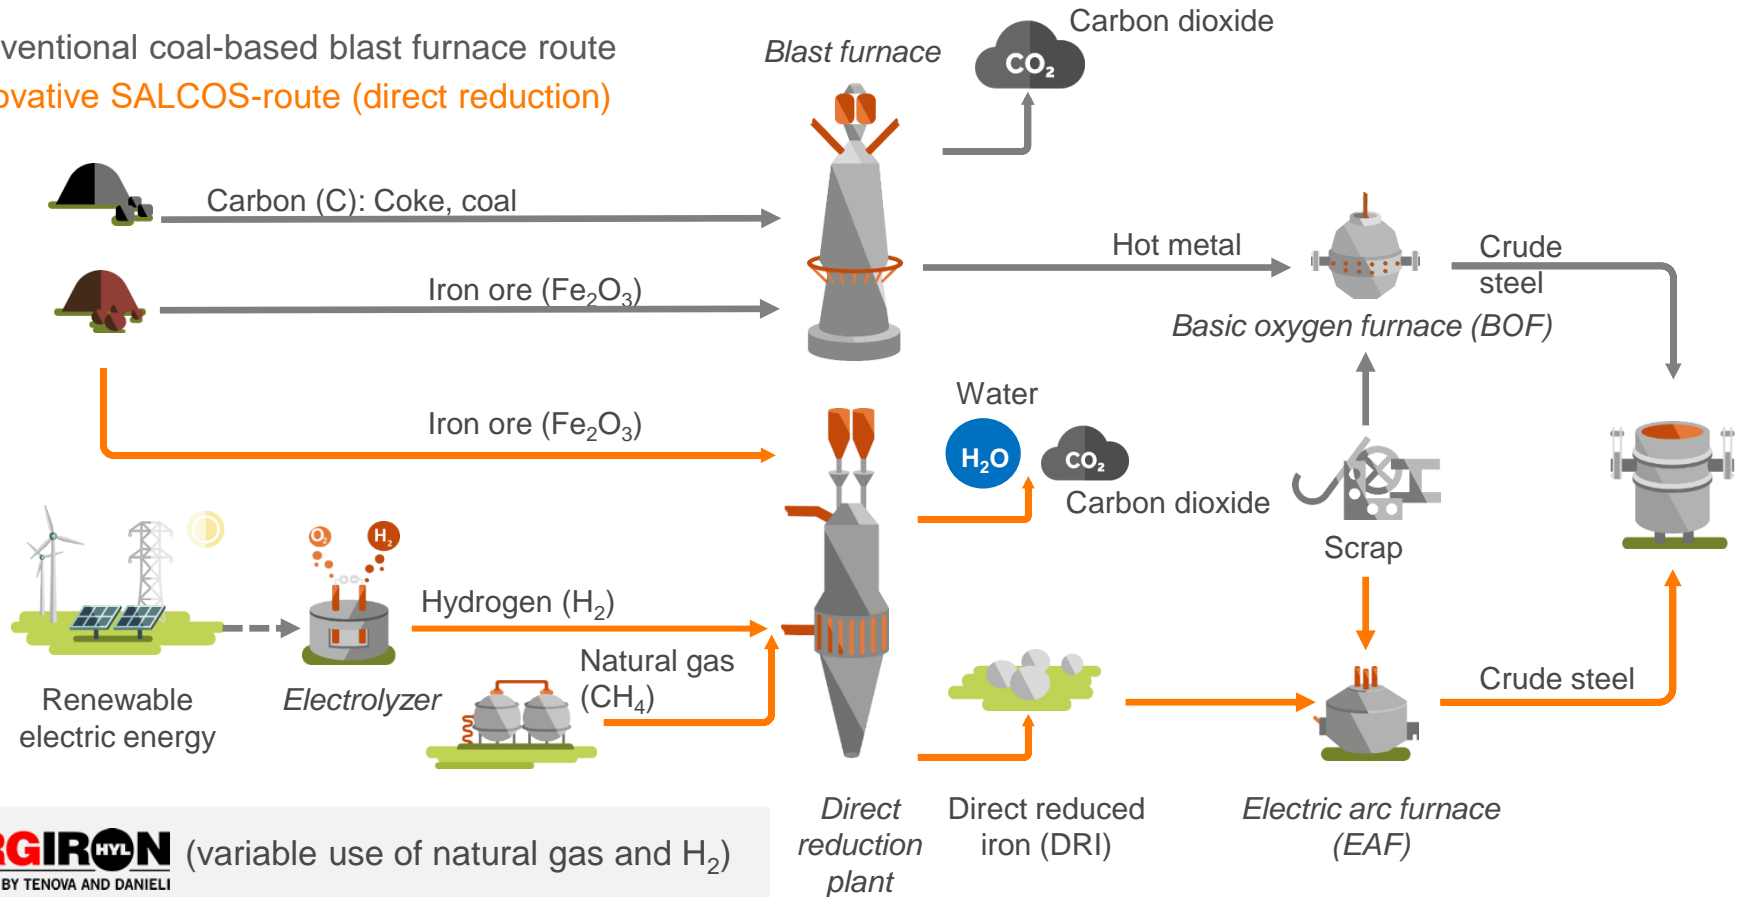

- Since March: ~270,000 Nm³ H₂ injected (24.3 t_{H₂})
- Actual Capacity: 100 Nm³/h (200 Nm³/h by end of 2021)
- Since May: ~80 % availability (time)
- El. Efficiency: 84 %_{LHV} (HTE incl. BoP)

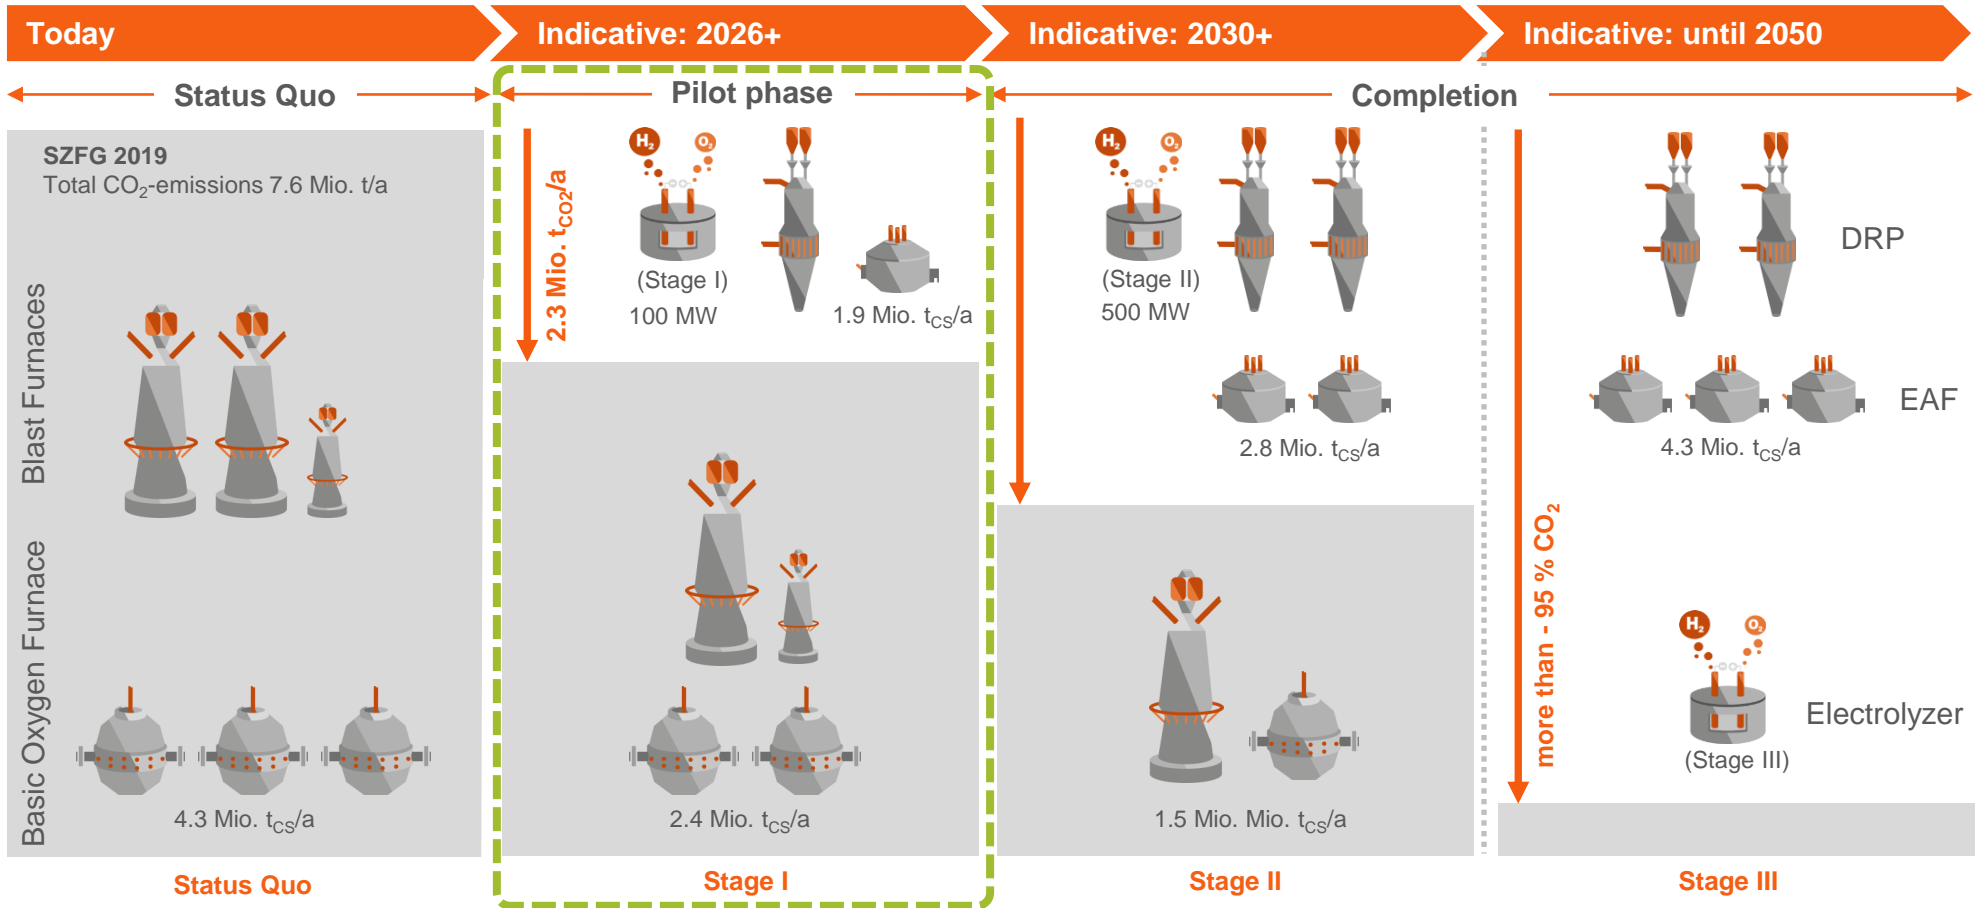

SALCOS® – Flexible hydrogen-based direct reduction

→ conventional coal-based blast furnace route
→ innovative SALCOS-route (direct reduction)

Transformation of integrated steelmaking in Salzgitter to H₂ enhanced DRP/EAF-based steelmaking in three stages

GrInHy2.0

Green Industrial Hydrogen

This project has received funding from the Fuel Cells and Hydrogen 2 Joint Undertaking (JU) under Grant Agreement No 826350. This Joint Undertaking receives support from the European Union's Horizon 2020 Research and Innovation programme, Hydrogen Europe and Hydrogen Europe Research.
